The Photoshop Elements application is a stripped-down version of Photoshop that's less powerful but easier to use. Photoshop Elements is available at a discounted price for students and educators, so it can be an economical way to start using Photoshop. Both the Full version and Elements version of Photoshop are available for Windows and Macintosh. When it first launched in October 1997, Photoshop was simply called Photoshop Elements. It has now been renamed to Photoshop Classic, which is similar to its initial branding as Photoshop Elements. Adobe Photoshop is available in three versions: Photoshop, Photoshop Elements, and Photoshop Creative Suite. The most powerful program, Photoshop, is a raster image editor with many features, including layers, objects, masking, advanced color adjustment, and more. Photoshop's features are similar to those of Adobe Fireworks. A new version of Photoshop Classic, in the name of Photoshop CS, has also been released. Photoshop includes extensive tutorials that train users in how to use the features of Photoshop. Photoshop Elements is a simplified version of the program. It is intended to be an introduction to Photoshop, with features stripped down to the bare bones. It can, however, be used as a general purpose image manipulation program to make basic adjustments and provide layer-based editing. The program is a layer-based application with a similar interface to Fireworks. Photoshop Elements is available as a download for Mac OS and PC; however, it is included with the Windows version of Photoshop CS and Photoshop Creative Suite. In addition to Adobe's three major versions of Photoshop, other applications that are similar in functionality include: Adobe Illustrator - Adobe's vector image program that was originally developed for printing illustrations and logos. Now it is widely used to create graphics for logos, business cards, web design, product design, and more. - Adobe's vector image program that was originally developed for printing illustrations and logos. BrucePharmacokinetics and Pharmacodynamics of Cardiotonic Steroids. Cardiotonic steroids (CTs) have been used for decades to treat heart failure, but results have been inconsistent and no class-wide standard has been applied. We aimed to compare the pharmacokinetics and pharmacodynamics of CTs in a large cohort of patients with chronic heart failure, and potentially identify optimal doses and administration schedules. We extracted the pharmacokinetic parameters from published data (17 drugs). We compared the effects of CTs using i) the drug concentrations at the heart, ii) the maximum drug concentration achieved, and iii) the magnitude of the effect, including effects on left ventricular ejection fraction and heart rate. Among 17 CTs, levosimendan (long-acting) and milrinone had the largest effect on LV systolic function, whereas metoprolol and milrinone had the largest positive chronotropic effect. No drug improved diastolic function. When the maximal drug concentration was used to assess individual CTs, concentrations were highest for levosimendan and milrinone. However, when the activity was assessed as the integrated drug concentration over time (area under the curve), levosimendan had the largest activity (more than 7-fold larger than milrinone). The efficacy of CTs depends on their administration schedule and drug concentration. Our findings can be used to optimize administration schedules for individual CTs.#N canvas 0 0 1069 865 10; #X obj 70 348 list-

Q: Is there a way to apply a "convert to dimension" to all nested arrays? I have a lot of data in a single dataset that needs to be put into a nested array sputn = sputt[0:nrow(sputt),] for (i in 1:nrow(sputt)) { sputt[i,"Val1"] = sputt[i-1,"Val2"][(i-1) sputt[i,"Val2"] = sputt[i-1,"Val3"][(i-1) sputt[i,"Val3"] = sputt[i-1,"Val4"][(i-1) } In other words, I would like to apply a function to every value in sputt[i-1,"Valn"][(i-1) and recurse until I reach the "root" Is there an easy way to do this? A: You can convert it to a list and then use lapply; sputn = sputt[0:nrow(sputt),] lapply(sputt[1:nrow(sputt),], function(x) x[1:nrow(sputt),]) # [,1] [,2] [,3] [,4] [,5] [,6] [,7] [,8] [,9] [,10] [,11] [,12] [,13] [,14] [,15] [,16] [,17] [,18] [,19] [,20] # [1,] 1 # [2,] 2 2 2 2 2 2
